Description

ATLANTIS is a Greek SME with long standing experience in offering services and bespoke products in the industrial manufacturing domain. The expertise of the company is mainly in the design, interconnection and implementation of models and protocols for the manufacturing sector, decision support for the management and optimisation of production activities and assets' life-cycle, and in the streamlining of the various maintenance related processes (predictive, condition-based, and corrective). The company supports the clients in understanding and prioritising the manufacturing route, and in obtaining a holistic view of their plant performance.
